Galizia delivers compact 12 tonner

November 27, 2008 | [Comments](#) (0)

Galizia, the Italian based pick and carry crane manufacturer has developed a special compact version of its 12 tonne capacity G120E battery powered pick and carry crane for the Milan Urban Transport Company – ATM.

The two compact cranes arrived today

ATM is the company that manages the public transport system in and around Milan, covering 87 Municipalities serving a territory with an overall population of about 3 million.

The compact dimensions – include a narrower width of just 2,050mm and a shorter overall length at 3,700mm with 90 degree steering allowing the cranes to turn within their own length. Special axles have also been fitted in order to cope with the extra counterweight required to compensate for the smaller overall dimensions.

A crane goes straight to work lifting a heavy undercarriage

The first two of these special cranes were delivered yesterday, they have been designed to allow the cranes to work within confined areas of ATM's workshops to lift heavy replacement components into place on the company's trams. The units also have special hydraulic luffing jibs to lift the tram's pantographs into place.
